## What Is Zolpidem and Why Is It Prescribed?

Zolpidem is a sedative-hypnotic medication often prescribed for people experiencing difficulty falling asleep. It works by slowing brain activity to allow the body to relax and initiate sleep. The medication is widely recognized under the brand name Ambien.

Doctors typically prescribe it for:

- Short-term insomnia
- Sleep initiation problems
- Temporary sleep disruptions caused by stress or schedule changes
- Certain sleep disorders diagnosed by healthcare providers

Because of its sedative properties and risk of dependency when misused, regulatory authorities like the U.S. Food and Drug Administration and the Drug Enforcement Administration require pharmacies to verify prescriptions before dispensing it.
